

**Parkers support Uckfield School greenhouse project**

# WE'VE GOT THE BOTTLE FOR RECYCLING

Parker Building Supplies are once again involved in helping a local school to achieve part of it's aim to accomplish recycling targets. And in this case the result can truly be described as 'green'.

Uckfield Community College is taking part in a curriculum enrichment week and following an intensive period of Google research, stumbled upon the idea of building a greenhouse made entirely from recycled plastic bottles (and a bit of timber).

Using a simple wooden structure and making the walls and roof from plastic bottles and bamboo canes the students are able to achieve a recycled greenhouse which they can use all year round.

All the children involved will be constructing the building themselves although encouraged by staff at the school and with a little extra help from some loyal local friends ...

Parker Building Supplies were very happy to be involved with the project, not simply by supplying the timber structure and certain tools of trade to help them assemble the structure, but even down to donating a supply of plastic bottles kindly provided by our staff.
