

Underfloor heating solutions now available at Parkers

HOT FOOT IT TO PARKERS FOR UNDERFLOOR HEATING

Parkers now supply Continental Underfloor Heating systems for all types of property which can be easily linked into any heat source such as solar heating or an existing or new central heating system.

Providing warmth from the floor up, and using low temperature water which circulates through a series of continuous pipe loops laid under the floor, underfloor heating allows your boiler to consume less fuel, giving a lower running cost and less damage to the environment being ideal for conservatories, bathrooms and kitchen floors.

Continental Underfloor Heating kits are designed to meet the requirements of almost any wet underfloor heating scenario and are suitable for all types of property, whether domestic or commercial. They can be easily linked into any heat source including solar, geothermal, or any central heating system.

MANY ADVANTAGES

There are many other advantages to Underfloor Heating:

- The heat produced is greater than that produced by normal radiators
- Suitable for all types of boilers
- The systems are completely hidden with only the room thermostat being visible
- Underfloor systems can be easily combined with all radiators and towel rails
- Consumes less fuel

When you buy a Continental Underfloor Heating System, you buy safe in the knowledge that they are designed to comply with all the relevant floor heating regulations and standards, and all components manufactured using ISO accredited processes.
